Update 10/31/2022: Added ISO layout plate version.

This keyboard is a revision of a 3D printed Keyboard originally designed my Thingiverse user Fumbucker: <https://www.thingiverse.com/thing:3010436>

This build uses a Teensy 2.0 and QMK firmware. If you would like to flash the included firmware, make sure your wiring matches the included wiring diagram.

You will need:

1 - Teensy 2.0

68 - 1N4148 Diodes

68 - of your favorite mechanical keyboard switches

A compatible keycap set

3 - 2unit plate mount stabilizers

1 - 6.25 plate mount stabilizer for the spacebar

1 - USBC Breakout board

8 - 12mm M3 bolts

8 - 20mm M3 bolts

16 - M3 nuts

Some wire and maybe some rubber feet for the bottom

3D PRINTING SETTINGS

Material: PLA

Infill: 20%

Layer Height: .2mm

Supports: No

This remix is based on
